SUMMARY

Software Engineer with 7+ years of experience building complex web and mobile products with TypeScript, Angular, and React Native. For the past 4+ years, I've contributed to Zahara, an enterprise procurement platform used by thousands of users across hundreds of organisations, progressively taking ownership of product features, frontend architecture, modernization, and mobile delivery. My work focuses on building secure, scalable product features, improving delivery speed and reliability, and solving complex business workflows across web and mobile applications.

EXPERIENCE

Senior Frontend Developer (Zahara Software)

Circle Square Limited

📅 05/2022 - 08/2026 📍 Bath, United Kingdom

- Owned product features end-to-end, from requirements to implementation, testing, deployment, and post-release improvement, collaborating closely with stakeholders, while contributing to architectural decisions, mentoring engineers, and leading code reviews for a modern Angular frontend.
- Collaborated with backend developers to integrate Angular with C# .NET 8 services using NSwag TypeScript proxies, updating endpoints and DTOs and applying SQL fixes to ensure frontend-backend integration.
- Led the large-scale frontend modernization in an Agile delivery environment, providing technical leadership while upgrading Angular 11 to 21, TypeScript 2.4 to 5.9, and RxJS 5 to 7.8, moving builds from Webpack to esbuild, and cutting CI times by about 50%.
- Introduced and scaled NgRx state management and effects across complex frontend workflows, improving predictability, maintainability, and state handling across multistep user journeys.
- Implemented AI-assisted engineering in daily delivery, using domain-specific skills and AI reviews, including building a custom MCP server with the TypeScript SDK, enhancing consistency and quality.
- Managed and evolved mobile applications, including maintaining the legacy Cordova React Native app through Android 15 compatibility issues, and upgrading the Expo React Native application while introducing AI-assisted development practices to improve delivery.

Frontend Developer

Circle Square Limited

📅 02/2019 - 05/2022 📍 London, United Kingdom

- Developed and maintained enterprise web applications using Angular, TypeScript, JavaScript, HTML, and CSS, delivering new functionality and improving complex UI workflows in a large-scale product environment.
- Built responsive, cross-browser user interfaces, forms, and REST API integrations, delivering reliable experiences across business-critical workflows.
- Resolved bugs and edge cases proactively, improving reliability through attention to detail while communicating with teammates during code reviews and technical discussions on large-scale enterprise software development.
- Built reusable frontend components and patterns, implemented a custom TypeScript decorator for Angular components to integrate with the centralised feature-toggle system, providing a simple and consistent way to control feature availability.

EDUCATION

Master of Engineering - Electronics and Communications

Zaporizhzhya National Technical University

📅 09/2014 - 01/2019 📍 Zaporizhzhya, Ukraine

PROJECTS

Payment Integration

Built the frontend for a payment integration that streamlined approval and in-app payment execution. Delivered validation-heavy approval UI, touch-swipe approval for multi-document actions, WebSockets real-time lock/unlock behavior, and live exchange-rate handling for multi-currency payments.

Document Matching

Designed a line-by-line document matching UI for invoice reconciliation, enabling users to compare, edit, and match document line items in real time. Built the core matching logic, sync-scrolling, inline editing, visual matching indicators, full-screen mode, and read-only comparison views.

SmartSync Cloud Integration

Developed the UI for a SmartSync Cloud integration centered on a custom template-mapping editor. Built an interactive contenteditable-based editor with editable placeholders and cursor-preserving reinsertion for complex document configuration workflows.

Login & SSO Flow

Built a new authentication experience during the migration from ASP.NET to the main web application, delivering 2FA with authenticator apps and Google/Microsoft SSO flows, and achieved a reduction in login time from about 30 seconds to 1-2 seconds.

KEY ACHIEVEMENTS

Unified Angular UI Platform

Removed legacy UI frameworks and standardized the application on Angular Material, reducing technical debt, improving consistency, and creating a stronger foundation for reusable component development.

Improved Financial Transaction Reliability

Replaced floating-point monetary calculations with a centralized decimal.js implementation, eliminating precision issues across invoices, purchase orders, and payment workflows.

Eliminated Deployment Cache Issues

Researched and discovered IIS configuration as the root cause of long-standing deployment problems and applied an infrastructure-level fix that permanently resolved stale JavaScript bundle issues after releases, demonstrating strong problem-solving across the release process.

SKILLS

Languages & Frameworks

TypeScript	JavaScript	Angular	React Native	Expo	
RxJS	NgRx	HTML	CSS	SCSS	Angular Material
Bootstrap	NgBootstrap	PrimeNg	DevExpress	Chart.js	
Tailwind CSS					

Backend & Integration

REST APIs	WebSockets	SignalR	NSwag	.NET 8
SQL	Node.js	MCP / TypeScript SDK		

Engineering

Application Architecture			Automated Testing	Unit Testing
CI/CD	DevOps	Git	Secure Engineering	
AI-Assisted Engineering				

LANGUAGES

English	Proficient
Polish	Beginner
Ukrainian	Native

CORE STRENGTHS

Problem-Solving	Critical Thinking
Attention to Detail	Systems Thinking
Proactivity
